EDUCATION

The Ohio State University

Bachelor of Science in Computer Science and Engineering

Columbus, OH

Aug 2023 – May 2027

EXPERIENCE

K.C. Voicebotics

Jan 2026 – Present

Software Engineer Intern (Full Stack & Integration)

Remote / Columbus, OH

- Engineered a scalable **Multi-tenant OAuth 2.0** pipeline via **React and Spring Boot** to securely integrate **Meta (Instagram/Facebook)** and **Reddit APIs**, managing stateful authentication and automated token refresh for 100+ clients.
- Optimized backend routing and asynchronous processing for an AI-driven SaaS (LocalRank365), reducing JSON payload latency by 25% and accelerating cross-platform content deployment efficiency by 40%.
- Enforced 99.9% synchronization accuracy across distributed third-party states by configuring dynamic **Webhooks** and **Redirect URIs**, enabling real-time preview and approval workflows for localized marketing agents.

Intellicrane Tech

May 2025 – Aug 2025

Software Engineer Intern (Backend & Computer Vision)

Shenzhen, China

- Automated quality assurance and real-time bug triaging on high-throughput assembly lines, achieving a 95% defect detection rate by deploying a **Hardware-in-the-loop (HIL)** computer vision pipeline using **YOLOv5** and **Flask**.
- Decreased model inference latency on edge devices by 30% via **Model Quantization** techniques, ensuring high-availability persistence alongside a decoupled **AWS S3** media ingestion service.
- Improved cross-functional deployment reliability by 20% by architecting an automated **Black/White Box Test Generation** suite in **PyTest** to validate RESTful APIs and cloud storage integrations.

LBASE Technology Company

June 2024 – Sept 2024

Full Stack Developer Intern

Shenzhen, China

- Architected the backend and merchant-facing frontend of a high-concurrency e-commerce platform (Buckeyeshopping) leveraging **React, TypeScript, and Spring Boot**, increasing user conversion rates by 40%.
- Slashed API response latency by 30% during traffic spikes by optimizing database read/write throughput through a normalized **PostgreSQL** schema and a **Redis Cache-Aside** pattern.
- Guaranteed 100% ACID transactional integrity for **Stripe API** payment gateways, while accelerating delivery cycles by 15% through **Docker** and **GitHub Actions CI/CD** pipelines.

PROJECTS & OPEN SOURCE

Google Summer of Code 2026 Contributor: PSF (pocketpy) & Godot | C, Python, AI

Feb 2026 – Present

- Architecting an autonomous "vibecoding" AI agent as an accepted **GSoC 2026 Contributor** under **PSF**, integrating LLM tool-calling capabilities to streamline game scripting and dynamic code generation.
- Enhanced **pocketpy** (lightweight Python interpreter) by implementing standard library internals (**operator.itemgetter**) and modern static typing placeholders (**typing.ReadOnly**) in C.
- Managed the C-level build pipeline (**prebuild.py**) to regenerate and synchronize underlying **_generated.c** source bindings with high-level Python updates.
- Engineered a non-blocking background worker within a custom **Godot Engine** build to orchestrate asynchronous, AI-driven backend communication without stalling the main rendering thread.

Serverless AI Support Agent | Java 21, Spring Boot 3, AWS, PgVector

Dec 2025 – Present

- Architected a scalable, autonomous mental health support agent using **Spring Boot 3** and **React**, leveraging **Tool Calling** and **MCP** to trigger external wellness APIs during long-horizon conversations.
- Designed a high-precision **Retrieval-Augmented Generation (RAG)** pipeline backed by **PgVector**, enabling contextual, sub-second therapeutic knowledge querying.
- Provisioned a highly available **Serverless** infrastructure utilizing **AWS Lambda** and **ECS**, optimizing cloud resource allocation and minimizing idle compute costs.

TECHNICAL SKILLS

Languages: Java, Python, SQL, C, TypeScript, JavaScript (ES6+), HTML/CSS

Backend & Cloud: Spring Boot 3, AWS (S3, Lambda, ECS), Node.js, Docker, PostgreSQL, Redis, MySQL

AI & Architecture: RAG, AI Agents, LLMs, MCP, LangChain, PgVector, Microservices, RESTful APIs, Serverless

Frontend & Tools: React.js, Next.js, Tailwind CSS, Git, GitHub Actions (CI/CD), PyTest, Linux, Godot
