Education

The Ohio State University

B.S. in Computer Science and Engineering | GPA: 3.53/4.00

Columbus, OH
Expected May 2027

Experience

Python Software Foundation | Google Summer of Code 2026

May 2026 - Aug 2026

Open Source Software Engineer, pocketpy

Remote

- Built the Godot Vibe Plugin with GDScript and FastAPI for asset generation, image editing, and scene automation; used validated LLM plans and a deterministic fallback to constrain generated actions.
- Unified PixelLab and GPT Image through a provider interface and five-stage pipeline, making new art styles configurable through JSON packs across 46 materials and 6 regression test suites.
- Extended pocketpy, a C-based Python interpreter, with standard-library and typing internals; maintained generated C bindings and contributed JSON numeric serialization fixes.

K.C. Voicebotics

Jan 2026 - Present

Software Engineer Intern | Full Stack and Platform Integrations

Remote / Columbus, OH

- Built a multi-tenant OAuth 2.0 pipeline with dynamic redirects and per-tenant token refresh, replacing code changes with configuration entries for new third-party integrations.
- Reduced asynchronous JSON payload latency 25% for 100+ concurrent clients by restructuring Spring Boot routing and batching downstream API calls, with a React operator console.
- Implemented idempotent webhook handlers and exponential-backoff retries to recover from third-party failures and support near-real-time preview and approval workflows.

Intellicrane Tech

May 2025 - Aug 2025

Software Engineer Intern | Backend and Computer Vision

Shenzhen, China

- Built a YOLOv5 and Flask inspection service integrated with assembly-line hardware, achieving a 95% defect detection rate in production QA.
- Reduced edge inference latency 30% with post-training quantization; decoupled media ingestion into AWS S3 and tested REST and storage paths with PyTest.

LBASE Technology

Jun 2024 - Sep 2024

Full Stack Software Engineer Intern

Shenzhen, China

- Reduced API response latency 30% during e-commerce traffic spikes through PostgreSQL schema normalization, covering indexes, and a Redis cache-aside layer.
- Hardened Stripe payments against duplicate client retries using idempotency keys and transactional writes; added GitHub Actions CI before Docker deployments.

Projects

SpellTide Godot Native Extension

Mar 2026 - Present

C++17, CMake, godot-cpp, Godot, pocketpy

- Developed native C++17 modules for cube-body collisions and torus tilemap queries, integrating Godot with pocketpy.
- Prototyped batched tile rendering with Godot MultiMesh and coverage logic for circular bodies on a square grid.

Serverless AI Support Agent

Dec 2025 - Present

Java 21, Spring Boot 3, React, AWS Lambda/ECS, pgvector

- Built an AI support agent that invokes external APIs through MCP tool calling and retrieves context through a pgvector RAG layer for multi-step requests.
- Separated stateless Java 21 handlers on AWS Lambda from long-running jobs on ECS to limit idle compute.

Technical Skills

Languages: Java, Python, C++17, C, SQL, TypeScript, JavaScript, GDScript, Bash

Frameworks: Spring Boot, FastAPI, Flask, React, Next.js, Node.js, JUnit, PyTest

Cloud and Data: AWS Lambda/ECS/S3, Docker, PostgreSQL, Redis, Git, GitHub Actions, Linux
